Message from the Guest Editor

Dear Colleagues,

This Special Issue is a selection of papers that will address the challenges and strategies for transforming the electricity grid to meet the demands of the future. Renewable energy sources will constitute a large part of the generation mix in future and will bring challenges due to their non-dispatchable nature. In addition, a penetration of low inertia system and grid edge electronics will change the dynamics of the power system. At the distribution level, potential disruptions due to large-scale penetration of plug-in electric vehicles, distributed generation, and dynamic prosumers is foreseen. What strategies do we use to transform the grid that are not highly disruptive? How do we leverage the digitization of the grid to create a sustainable and environmentally friendly grid?

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
