Deadline for manuscript submissions:

**closed (10 February 2022)**

### Message from the Guest Editors

Dear Colleagues,

Green chemistry (GC) aims at the development of chemicals and chemical processes to reduce the impact on human health and the environment. GC seeks environmentally friendly alternatives to reduce hazards associated with chemical activities that are essential to the world economy and modern societies.

Green analytical chemistry (GAC), a growing research field with the goal of designing novel analytical methods in which the toxicity and amount of waste are minimized without affecting or even enabling superior analytical performance. This Special Issue entitled “Green Analytical Chemistry: Development of Sustainable Analytical Methods for Food and Environmental Samples” aims to encourage scientists to publish new green analytical methods as well as critical reviews in this topic. New insights in sampling, sample pretreatment, and analyte determination are welcomed.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
