Deadline for manuscript  
submissions:

**closed (15 December 2022)**

### Message from the Guest Editors

Groundwater recharge represents the replenishment of the saturated zone of aquifers and it is one of the most important hydrological parameters to manage and protect water resources from over-exploitation and to estimate fluxes of fluids, solutes, and contaminants from the surface to groundwater. Groundwater recharge, along with evapotranspiration, represents the connection between the atmosphere and the groundwater system and relates the climate, vegetation, land use, and subsurface characteristics for a given area.

In this Special Issue, we would like to collect the most recent research progresses on this topic, including the use of innovative methods (tracers-, physical-, empirical-, and model-based), data (field data and remote sensing), and case studies from areas of the world with different climate, land use and type, and surface and subsurface characteristics. Moreover, we would like to broaden the horizon to also include studies that link recharge to the other water budget components, such as evapotranspiration and runoff, with a focus on groundwater resource quantification and its sustainable use.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
