Message from the Guest Editors

ustainability and cybersecurity theory comprises the analysis and protection of sustainable systems, which can be approached from many different points of view. Novelty in cybersecurity builds theories represented by mathematical models that aim at understanding fundamental questions of systems' spatial structure, self-organization, vulnerability, interaction, behavior, and development. Researchers, as a result, are increasingly facing the challenge of dealing with sustainability in advanced engineering applications and security that are based on efficient mathematical models. The topics that deal with these issues can be divided into three general parts: i) the development of general mathematical methods/models, ii) specific applications in particular domains, iii) cybersecurity assurance of the systems. The focus of this issue on the topics of information, cybersecurity and modeling sustainability is on mathematical models and engineering applications in sustainable systems. Moreover, we are interested in both new theoretical developments and studies regarding practical implementation concerning modeling, sustainability, attacks, and system vulnerability.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
