Water Resources, University of
California, Davis, CA 95616, USA

Deadline for manuscript
submissions:

12 June 2025

Message from the Guest Editor

Over the past few decades, the notion of soil health and its relevance to the environment has been increasingly documented. Though this is so, despite the intuitive understanding of soil health through its connection with human health, its quantitative definition is still ill defined. This Special Issue seeks scientific contributions that provide opportunities for the development of soil management theories and practices that focus on the resilience of both natural and agricultural ecosystems to changes in land use, climate, and other human-induced activities. These could be investigations into physical, chemical, or biological soil processes and properties contributing to soil health and resilience, or case studies that show the impacts of policy and land management on human-landscape interactions, thus emphasizing the natural value of soils their diversity, and their broader contribution to society.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
