

## Landslides in Urban Environments: Monitoring, Impact Mitigation and Resilient Enhancement

Guest Editors:

**Dr. Roberto Sarro**

Department of Geological Hazards and Climate Change, Geological Survey of Spain (IGME-CSIC), Ríos Rosas, 23, 28003 Madrid, Spain

**Dr. Ignacio Pérez-Rey**

CINTECX, Grupo de Xestión Segura e Sostible de Recursos Minerais (XESSMIN), Universidade de Vigo, 36310 Vigo, Spain

Deadline for manuscript submissions:

**5 January 2025**

### Message from the Guest Editors

Landslides represent one of the major natural hazards, which affect the socioeconomic framework of the world. The landslide risk might increase due to human activities, like growth of the population, land-use intensification and industrial development. There is an emerging appeal for developing new common policies and strategies to reduce the impact of landslides, as well as to reflect several instruments for risk management.

We would like to invite you to participate in this Special Issue, which will focus primarily on presenting new tools, original methodologies, and innovative approaches to evaluate landslides activity in urban areas, to predict their potential impacts on population and infrastructures, and to increase the resilience of built-up areas.

Contributions to this session will also provide scientific instruments to support the capabilities of the actors implied in risk management (i.e., Civil Protection, Administration). Main landslide types are considered: from rockfalls to debris flows including local to global case studies, as well as experimental, analytical and numerical approaches.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
