Deadline for manuscript  
submissions:

**closed (20 May 2023)**

### Message from the Guest Editors

Human beings are significantly changing the terrestrial land cover by transforming vast wild areas into human-dominated land-use types. Intense land-use change can increase soil and nutrient erosion and reduce crop yield, and conversions between different land-use types can degrade ecosystem function and erode biodiversity. Maintaining balance between land use and ecosystem services is critical to our sustainable socio-economic development. Although many scientists have worked on related topics, more efforts are still needed to get detailed knowledge of land-use change and its effects. The advancements of big data, artificial intelligence and cloud computing technologies will help enhance the reliability and replicability of our findings.

This Special Issue aims to collect high-quality research targeting the use of big data and deep learning in land-use analyses.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
