Message from the Guest Editors

Dear Colleagues,

Soil erosion is a major environmental problem globally, leading not only to land degradation and reduced land productivity but also effects on agricultural production and food security. Pollutants transported via runoff sediment have serious impacts on the ecology, environment, human survival and socio-economic development of downstream areas. Soil erosion can cause serious soil erosion problems, resulting in large amounts of soil nutrients flowing into rivers and lakes with surface runoff. Soil nutrient loss can cause a decline in land quality, reduce fertilizer utilization and pollute water bodies, causing ecological imbalance. Soil nutrient management not only presents a challenge to soil erosion research, but also acts as a basis for soil and water environment pollution investigation and assessment.

In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: soil erosion and land degradation; soil nutrient loss and management; investigation and assessment of soil and water pollution; soil and water conservation, etc.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
