Message from the Guest Editors

With the increasing requirements for environmental protection, the proportion of traditional fossil fuel in the global energy structure is gradually decreasing for the reason of greenhouse gases emission. Energy harvesting is the core technology of those energy sources which directly use available energy from the surroundings through energy conversion into electricity. While this technology has made great progress, how to increase the power density is still a research hotpots.

Therefore, this Special Issue aims to create a platform to discover the most recent advances in Energy Harvesting, Transfer and Storage technologies. We want to facilitate a better understanding on the energy harvesting mechanism, novel structures, high efficient energy transmission (wired or wireless) and novel energy storage methods. Moreover, this collection is designed to bridge the gap of theoretical analysis and industrial applications, and inspire new ideas.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
