Message from the Guest Editor

Dear Colleagues,

Soil loss is a global threat to the integrity and function of the Earth's ecosystems. Erosion and landslides are two natural hazards responsible for severe soil loss globally. The severity and recurrence of erosion and landslides will likely increase under the predicted scenarios of climate change, creating an urgent need to take action against soil loss. Nature-based solutions (NBS) are ecology-based, integrated approaches that work along with nature to manage natural hazards and solve engineering problems sustainably.

This Special Issue aims at gathering a series of original contributions including, but not limited to, novel research, tools, frameworks, approaches, indicators, and case studies focusing on examples demonstrating how NBS can be used sustainably for erosion control and slope protection.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
