Deadline for manuscript  
submissions:

**closed (31 October 2021)**

### Message from the Guest Editor

The current climate crisis, determined by the anthropogenic change of the atmospheric composition, requires rapid and coordinated actions by society. However, from the scientific community, a clear pathway towards its solution has not yet been established.

There are two different perspectives that can be considered for this solution, namely: One is biogeochemical, related to the balance between absorbed and released carbon dioxide, alongside with other GHGs. The second is human-related, involving the dynamics of the human population and its propensity to consume.

This Special Issue aims to collect current knowledge and modeling studies about the carbon-use efficiency in natural and human-managed ecosystems, and new proposals aimed at increasing the long-term capacity of the terrestrial ecosystem to sequester carbon, through practices like biochar or new methods. To reach the expected results, these modeling efforts and new proposals should be contextualized in the perspective of human population dynamics.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
