Message from the Guest Editors

Dear Colleagues,

Li-ion batteries (LIBs) are one of the effective solutions in modern society to reduce GHG emissions from one of the major GHG emitters, that is, the transportation sector. LIBs currently represent a critical pillar to achieve a fossil fuelfree economy. Global LIB manufacturing is growing very quickly to meet the high demand and usage in vital applications such as portable electronics, electric vehicles, and grid storage.

The lifetime of LIBs is quite limited. In this context, the recycling of spent LIBs can play a significant role in securing a sustainable supply of critical metals for new LIBs production while simultaneously reducing landfill waste. Thus, technologies that can stably secure strategic metals must be developed. This Special Issue welcomes original articles and reviews addressing innovative and sustainable technologies for the recycling of exhausted batteries to overcome the problems connected with limited raw materials and increasing demand of these resources.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. Sustainability publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
