Message from the Guest Editors

About 790 million people still lacked access to electricity in 2018, and there are clear indications that the goal of universal access, a key to the fulfillment of SDG 7, will not be reached by 2030.

Developing countries are typically endowed with great renewable potential that is limitedly tapped. To bridge the access gap in a sustainable and cost-effective manner, an extensive deployment of renewable energy systems will be needed in the coming years, considering both on-grid capacity expansion and off-grid systems, and either standalone grids or minigrids.

Therefore, this Special Issue focuses on the role that renewables can play in resolving this global issue, within a wide-angle approach. Contributions on the optimal design, implementation, and management of renewable systems are welcome, regardless of the electricity delivery mode, as well as papers tackling all the other factors that directly or indirectly support their implementation, such as understanding demand patterns and estimating load profiles, rural electrification planning, effective business models, supportive policies and regulation, productive uses of electricity and socioeconomic impacts.

an Open Access Journal by MDPI

Faculty of Engineering and
Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
