Message from the Guest Editors

The concept of the safety and reliability of Electric Vehicles' (EVs') components is considered a significant issue. In general, reliability assessment can be directly influenced by three main areas in the EV industry, i: EV manufacturers, ii: EV seller, and iii: EV customers. Additionally, the battery system, power electronic converter, and electric motors are known as main components of the E-power train of an EV that investigates reliability and safety in the mentioned components play a key role in the future perspectives of safety reliability assessment of EVs. The essential issues regarding the reliability assessment of EVs which need to be taken into consideration are how do the power components operate in EV, identifying failures in EV's components, inference of the failure sequences, introducing a model to illustrate the failures, and selecting a method to evaluate the reliability of EVs.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
