### Message from the Guest Editors

This Special Issue aims to propose a collection of studies that combine the aforementioned concepts, including methodologies and/or case studies on the following topics:

- assessment of sustainable marine developments and activities, including quantification of potential environmental, and socio-economic effects;
- investigation of the interrelationships between social and ecological factors within ecosystem-based assessments;
- the efficiency of protective measures such as mitigation or compensation measures;
- analysis of international or national marine policies and their contribution towards reaching or preventing reaching the aim of sustainable development;
- recommendations to improve on current processes and activities and the potential to lead to an increase the sustainability of our marine environment;
- how bioremediation and blue carbon can be used into the assessment of sustainability of marine activities.
