Deadline for manuscript submissions:

closed (31 March 2023)

Message from the Guest Editors

The maintenance safety of civil infrastructures, such as bridges, building structures, tunnels etc., is intimately affected by natural or human-made disasters, which has attracted widespread attention. It is of great significance to monitor and forecast the performance of structures in real time, in order to improve the operational efficiency of the engineering structures. Therefore, structural health monitoring (SHM) technology has become a hot issue in recent years.

With the development of advanced sensing, signal processing, and damage detection methods, SHM technology has been widely implemented in practical civil structures. Meanwhile, several new concepts have been proposed in SHM, including smart systems and smart materials. However, there are still many economic and practical challenges in further popularization and application of SHM systems.

This Special Issue will showcase some of the latest efforts to advance the frontiers of structural health monitoring in civil infrastructure. We invite researchers to submit original research papers that include new theoretical methods, numerical modeling, and practical or experimental studies. Review articles are also welcomed.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
