Message from the Guest Editors

Dear Colleagues,

Landslide phenomena can have significant impacts on people's life, health, and property. Natural hazard can be analyzed from a multidisciplinary perspective: Social and economic impact, "natural environment" impact, and psychological and physical impact. The reduction of the impact of landslides can be addressed by adopting a number of appropriate strategies and methodologies. However, it is important that the methodologies and approaches used be sustainable and community-based, that is, integrated approaches that take into account the social, cultural, political, and economic dynamics of the potentially affected territory. 'Community-based' means working with communities to identify and provide solutions to landslide vulnerability together. This Special Issue wants to address the sustainable and community-based approaches to enhancing strategies for avoiding or reducing landslide impact on people, private and public building, lifelines, and the natural environment.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
