### Message from the Guest Editors

Dear Colleagues,

The objective of this Special Issue is to compile the cutting-edge studies on trends in sustainable, ethical and responsible food consumption. This Special Issue aims to focus on different contexts within which sustainable food consumer choices satisfy economic, social, and environmental goals.

This Special Issue suggests to use “food consumer acceptance” as the ultimate latent dependent variable and invites theoretical and empirical studies on all themes that may have an impact on fostering consumers’ sustainable (responsible, ethical) food choices.

The Special Issue welcomes studies within the following sustainability contexts (although other relevant topics/contexts will also be considered), which all touch upon one or more of the economic, social, and environmental goals of sustainability, as described above:

- **Consumer “acceptance” and the decision-making process**
- **Citizenship vs. Consumerism**
