Message from the Guest Editors

Coastal waters and Mediterranean wetlands have been widely affected by anthropogenic activities, causing the disappearance of almost 50% of Mediterranean wetlands in the last 50 years, while fishery, urban growth, and probably the upcoming blue industry have been and will be responsible for significant impacts on coastal areas.

Sustainable management requires knowledge about long-term trends, time–space variability, and local impacts. Additionally, socioeconomic aspects in the drainage basin and along the coast are also taken into account. Ecosystem services are important to human wellbeing, so identifying and assessing these services, as well as the ecosystem resilience to human pressures and global change, is an important issue for sustainable management. This Special Issue welcomes Original Research and Review papers focused on the latest knowledge and innovations in sustainable wetland, transition, and coastal water management. Contribution of field and remote sensing studies, model-based approaches as well as any combination thereof are welcome, aiming to fill the gap of transdisciplinary studies considering drainage basin–wetland and land–sea interactions.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
