Dr. Nicola Frison

Department of Biotechnology, University of Verona, 37134, Verona, Italy

Dr. Çağrı Akyol

Department of Green Chemistry and Technology, Faculty of Bioscience Engineering, Ghent University, 9000 Ghent, Belgium

Deadline for manuscript submissions:

closed (15 September 2022)

Message from the Guest Editors

Changes in the climate toward warmer and drier conditions together with the over-demand for water will result in serious impacts on available water resources and create water stress. In addition to depleting the quantity of available water resources, climate change is also expected to contribute to deteriorating the quality of surface and groundwater (i.e., salinization, contamination). This will eventually boost the demand for finding local solutions and using nonconventional water resources, especially in water-scarce areas where the lack of good quality of irrigation water is already limiting agriculture. At this point, reclaimed wastewater reuse can help to address these issues, but its potential remains largely untapped from a practical and legislative point of view. In fact, the reuse of reclaimed water relies on many types of advances not only related to technological approaches, but also health, socioeconomic, and legal aspects.

Accordingly, this Special Issue welcomes research and review papers related to sustainable municipal wastewater treatment and reuse in an integrated approach.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
