Message from the Guest Editor

Dear Colleagues,

The importance of tropical crop science is increasing in response to global environmental change. As our planet gradually warms the ground temperature and affects CO₂ fertilization, the crop yield is gradually increasing. Therefore, it is important to elucidate the functionality and yield of tropical crops, and to further study sustainable agricultural management in tropical and subtropical regions. It is generally argued that the increased use of tropical crop resources diversity contributes to higher sustainability, productivity, and resilience of smallholder's farming systems. This Special Issue is focused on advancing aspects of crop breeding, genetics, physiology, ecology, agronomy, and cropping systems in sustainable tropical crop science and agriculture management under global warming.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
