### Message from the Guest Editor

This special issue welcomes original academic contributions that conduct in-depth analysis on the sustainability of the nexus between the human and mechanical or digital character of financial activity. The authors should pay emphasis to sustainability in human-mechanical cooperation in payment systems. Light should be casted on whether the intertemporal connectedness between humans and technology has managed to preserve high levels of efficiency and prosperity. The sustainability of potential benefits generated by this nexus is of special interest in this breakpoint era of financial modernization.
