Message from the Guest Editors

Dear Colleagues,

More than 50% of the world's population lives in cities and urban areas, which account for nearly 80% of the anthropogenic CO₂ emissions. To reduce global CO₂ emissions and limit the average temperature increase to less than 2 °C, as established by the Paris Agreement, it is required a massive scaling-up and acceleration of renewable energy in power generation, energy efficiency of industry and buildings, and the decarbonization of the transport sector. Furthermore, the recent energy crisis further stresses the urgency of these transformations towards more affordable, secure and sustainable energy. This Special Issue addresses the most recent scientific developments in the different areas that support the general action plan that will definitively transform the urban energy landscape in the ongoing transition.

Topics of interest include, but are not limited to, urban planning, the potential of renewable energy sources in urban environments, positive-energy buildings and districts, local energy communities, smart grids and distributed energy systems, demand-response management, and the decarbonized mobility of people and goods.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
