### Message from the Guest Editors

Dear Colleague,

Wetland ecosystems support a very high level of biodiversity and provide important services that help sustain and bring together the natural world and human cultures that share it. These values include supporting a unique and extremely productive habitat used by wildlife as well as humans, flood control, water purification, carbon sequestration, sediment and nutrient retention, and a rich natural heritage that flows into our societal and cultural values. Wetland ecosystems are a vital part of our natural heritage. On a worldwide scale, they provide services worth trillions of US dollars every year entirely free of charge. Thus, wetlands make a clear and vital contribution to human health and well-being. Due to the ever-increasing impacts of climate change, wetlands have become one of the most threatened ecosystems in the world. Effective protection and management of wetlands are urgent and critically important for human sustainable development.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
