Message from the Collection Editors

In the process of human social development, the consumption of fossil energy, especially coal, has promoted economic prosperity, cultural exchanges and social progress. With mining depth increasing, all the stress of buried rock stratum and surrounding rock, and gas pressure of coal seam increase gradually. Once the dynamic disaster occurs, it will induce miner casualties and property losses.

This Topical Collection aims to provide an opportunity for researchers around the globe to conduct a broader scientific and technological discussion on such advances to improve the prevention and control level of the disasters encountered during underground coal mining.

The discussion topics include but are not limited to, basic experiments, modeling, numerical simulation, and field tests of aforementioned disasters. Original research and review articles are welcome.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
