Message from the Guest Editor

Dear Colleagues,

Purpose of this Special Issue is to provide more insight on land degradation processes at various space and time scales, by gathering valuable scientific contributions on the following topics:

- Soil erosion: water erosion, wind erosion, rill and inter-rill erosion, gully erosion, erosion monitoring;
- Landslides: landslide susceptibility and risk assessment, landslide monitoring;
- Soil degradation processes: salinization/alkalization; compaction, acidification, fertility loss;
- Droughts: drought assessment and monitoring, desertification;
- Vegetation degradation: deforestations, forest fires, impact of land use change on land degradation;
- Other land degradation processes (e.g., coastal erosion, soil pollution, biodiversity loss).

We especially welcome contributions aiming to develop new investigation tools for land degradation or to improve the existent methodologies, as well as studies focused on the impact of recent climate change on land degradation.

Dr. Cristian-Valeriu Patriche

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
