Message from the Guest Editor

Dear Colleagues,

Numerous weather and climate extremes impact human society, the societal infrastructure, and the natural environment. Potential changes in climate are predicted to result in possible frequency and/or intensity changes in extreme events, increases in precipitation, decreases in extreme low temperatures, increases in extreme high temperature, and changes in ecological systems. Future research may consider focusing on future trends and changes in the frequency of extreme events based on the outcomes of the most integrated climate models, to evaluate the relationships between the severe weather extremes and the continued greenhouse gas scenarios of the coming decades.

This Special Issue aims to discuss various impacts of climate change on communities, public health, ecological systems, and/or infrastructures from scientific and/or sustainability perspectives.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
