**Dr. Malindu Sandanayake**

School of Engineering, RMIT University, GPO Box 2476, Melbourne 3001, Australia

**Dr. Yongtao Tan**

School of Engineering, RMIT University, Melbourne, VIC 3001, Australia

Deadline for manuscript submissions:

**closed (31 October 2021)**

### Message from the Guest Editors

Construction industry is one of the foremost contributors towards carbon emissions due to its excessive material usage, complicated construction processes and dynamic nature of the work. Decisions made on material selection and construction processes could influence the overall sustainability of the project and therefore there is a contemporary requirement to explore sustainable construction techniques. Often the short-term carbon emissions emitted during the construction stage can lead towards adverse environmental impacts towards human health and environment. With the upsurge of green and sustainable concepts, the construction industry is continuously hunting for even smaller process improvements to achieve lower carbon emission construction techniques. These techniques cover from material selection, waste reduction, reuse and recycle, efficient site operation to new materials, off-site construction, renewable energy, and digital technologies.

This special issue aims to capture outstanding research studies, reviews and design papers on low carbon construction practices that lead to sustainable construction and environment.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
