Deadline for manuscript  
submissions:

**closed (20 September 2022)**

### Message from the Guest Editors

Dear Colleagues,

This Special Issue was inspired by the increasing frequency and intensity of major hydrological extremes and the resulting water environment changes across our planet. Terrestrial and aquatic ecosystems are under increasing stress in the background of global change and ever-growing anthropogenic impacts in many regions. The alteration of eco-hydrology processes leads to a changed water cycle and solute transportation within the natural and artificial ecosystems, leading to a reallocation of water resources, threatening sustainability.

The Special Issue stems from the need to stimulate and collect the most recent results in this field with a specific focus on bringing together modelling applications and experimental experiences. The emphasis has necessarily been on marshalling the information that can be summarized in the following topics: soil moisture dynamics, soil–plant interaction, vegetation modelling, and the effects of climate change on ecosystems. Understanding the basic processes of ecohydrology will hopefully lead to the development of tools for a more sustainable use of water resources and the management of natural and artificial ecosystems.

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
