Message from the Guest Editors

The purpose of sustainable natural resource management is to ensure that resources are utilized in a way that does not adversely affect their on-going quality for current and future populations. Factors such as climate change, population growth, environmental pollution, agricultural intensification, and urban expansion can seriously affect the use and availability of resources for future generations. Geospatial Science, including spatial analytical techniques, earth observation satellites (active and passive), Volunteered Geographic Information (VGI), and crowdourcing are new and existing technologies to map, monitor and sense our scarce natural resources. We invite contributions on issues ranging from rangeland condition management, invasive species detection and modelling, biodiversity and conservation, urban sustainability, and land and forest management from all around the world. Papers incorporating novel and interesting Geospatial Science techniques are particularly encouraged.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
