Message from the Guest Editors

Invasive fishes can cause adverse and complex ecological and socio-economic impacts worldwide. Management actions are always needed to minimize these impacts. These actions include the containment of existing populations to prevent their further spread, population control by suppression through removal programmes, and eradication attempts from specific waters or well-defined spatial areas. On the other side of the coin, they are frequently used to enhance aquaculture and fisheries within the context that they are valued by the public. When an introduced invasive fish has minimal socioeconomic value to that recipient society, the implementation of management programmes should be in accordance with the assessed level of environmental risk, whereby decisions should be made on risk management principles that identify, evaluate, select, and implement commensurate actions.

Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
