Message from the Guest Editors

Dear Colleagues,

Marine habitats present the most disparate characteristics, from the intertidal to the deepest environments. Marine organisms can show a lot of morpho-functional and ecologically specialized adaptations to the great diversity of habitats and associated environmental factors in which they live, but also to the different anthropic pressure present especially along coastal areas.

This Special Issue, “Morpho-functional adaptation of marine organisms to different habitats”, will consider high-quality research regarding different aspects of morpho-functional adaptation of marine species to different environments, especially “extreme” environments. Among these, special consideration will be given to biota adaptations for living in intertidal zones, anoxic waters, deep-sea environments, hydrothermal vents, contaminated coastal and deep-sea environments. Studies using model organisms to explore adaptation to different conditions in microcosms will be also welcomed.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
