Message from the Guest Editor

Keeping up with the needs of capital developments and maintaining long-range operation and maintenance requirements require systems that are capable of meeting these needs in a sustainable way. Public-private partnership (PPP) is a project delivery system that can play an important role in the sustainable development of public facilities and infrastructure. From meeting financial needs to assuring efficiency, availability, quality, performance, and environmental safety, PPP can be tailored to achieve sustainable development of public facilities. While satisfying financial needs has been the common target of public owners using PPPs, the contribution of PPPs in achieving sustainable development have been overlooked and overshadowed by the financial aspects. In this Special Issue, researchers are invited to submit their research contribution on the role of PPP in achieving sustainable development of public facilities and infrastructure.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
