Message from the Guest Editors

New evaluation techniques for the unprecedented Sentinel-3B OLCI satellite imagery involve possible uncertainties in the methodologies employed but provide a further avenue for analysis to researchers around the world. Multi-analytical approaches, modern progress in nano-geochemical studies, as well as new developments in nano-science may have important consequences for physico-geochemical work and remote sensing, which may allow for the identification of terrestrial objects in high resolution satellite images. They may also enhance the identification and solution of problems related to pollution in water resources, serving as a methodology for environmental recovery and supporting the formation and construction of public policies aimed at the preservation of the environment in order to guarantee future sustainability proposals on a global scale.

Deadline for manuscript submissions:

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
