Message from the Guest Editors

Infrastructures are essential for maintaining social well-being and economic prosperity. Recent studies have shown that such infrastructures influence about 72% of targets set out towards meeting the Sustainable Development Goals. Though climate risks are recognized as a threat to infrastructures there is still a lack of knowledge and tools for quantifying such risks.

This Special Issue will address the challenges of understanding systemic risks to infrastructure systems due to environmental stressors. We invite theoretical, methodological, and quantitative studies that enrich our knowledge and understanding of climate vulnerabilities, risks, and resilience of infrastructure systems. We encourage multi-disciplinary approaches that combine quantitative and qualitative modeling approaches across climate science, infrastructure modeling, and social sciences with a focus on how models can better inform decision-making and policy on climate adaptation of infrastructures.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
