### Message from the Guest Editor

Complexities of sustainable construction and development have to be studied, including the challenges, importance, and impact on the performance of functions. Furthermore, innovation, professionalism, ethics, culture, and procurement practices and regulations should be addressed.

In this Special Issue, we invite contributions to the obligations and actions that play a role in the concept and practice of sustainability in construction and development and that explore the need for environmental, economic, and social sustainability, and the implications for the construction industry.
