### Message from the Guest Editors

This Special Issue will bring together a collection of works that collectively contribute to a better understanding of the challenges that sustainability and climate change pose to firms. All firms, large or small, young or established, public or private, are confronted by the subject of sustainability and its impact on their performance and innovation. Society increasingly expects firms to lead on sustainability practices, mitigate environmental impact, and navigate climate change. The purpose of this Special Issue is to promote theoretical and empirical research on sustainable entrepreneurship, firm performance, and innovation in order to better understand the connections between entrepreneurship, sustainability, innovation, and financial and non-financial forms of firm performance. We encourage submissions that systematically examine existing literature, provide empirical tests of new and existing theories, or develop thought-provoking agendas for future research.
