Message from the Guest Editors

In recent years, there has been a surge in interest in examining how various techniques and tools can be applied to aid the decision-making process for transport projects when faced with situations of deep uncertainty. Such uncertainty in the area of transport and mobility can be associated with topics such as a growth or decline in economic activity, climate change, the influence of intelligent transport systems, the Internet of Things and computer science and, more recently, global pandemics.

The objective of this Special Issue is to present research that explores existing and new, innovative approaches being applied to understand and cope with the impacts that deep uncertainty places on decision-making processes in transport. Papers on new methods examining these impacts, as well as case studies quantifying them, are welcomed.

Papers suitable for this issue should focus on topics including:

Transport modelling

Adaptive policymaking

Travel behavior

Transport policy appraisal

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
