Message from the Guest Editor

Dear Colleagues,

This special issue of Sustainability has two pivot points—first it advocates for an explicit ecosystem approach to urban ecology; and second, it argues for a distributed, decentralized approach to nature conservation. The first focus derives from a nested, scale-hierarchic processfunction view of nature, one that transcends the morphological limits of conventional nature depiction. A tree, for instance, is more than the aggregation of trunk, roots, branches, leaves and such, but instead is better knowable as the flows of carbon, nitrogen, water, and so on.

The second pivot point is about nature conservation as a distributed function. Rather than being satisfied with finding, bounding and naming large tracts of wilderness as pristine nature, what if we were to seek to conserve nature everywhere—take our manicured and groomed lawns and give them over to nature, find the byways and pathways around our high-tension cables and mindfully give them over to a purposive nature, one that intentionally makes for habitat that aims to help endangered species of birds and animals gain footholds everywhere.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
