Message from the Guest Editors

A central idea to urban sustainability is the assessment of the current and future paths of the development of the city. These paths have to be viable in the long run through an attentive use of resources while producing human livability. It is understood that paths of development can at least be outlined, if not precisely predicted. The notion of resilience is more recent and accounts for the recognition of the uncertainty along the trajectory of change that the urban system undergoes during its evolution. Resilience is precisely the capacity of the city to adapt and even, at least in some degree, transform in the face of external or internal challenges without losing some key structure and functions that make it a livable place.

The aim of this Special Issue is to investigate different facets of urban form resilience and its relationships with sustainable development.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
