Message from the Guest Editor

It is not enough to say that the majority of the world's population lives in cities. It is no longer sufficient or even acceptable to use the word “city” or “metropolis” as if they mean the same thing all over the planet. These words can no longer describe all realities in terms of quality, or quantity or even, of concern here, in terms of transformation dynamics. For each type of city—those that are growing, those that are being renovated, those that are in crisis, those that are hesitating about their future—there are different challenges that require distinct resources and models for governing solutions.
