

## Special Issue

# Environmental Governance and Environmental Sustainability

### Message from the Guest Editors

Since the industrial revolution, humans have enjoyed rapid economic growth that brings wealth and prosperity to us. However, it also causes a variety of global environmental problems that threaten our survival. Facing the challenges, the United Nations (UN) World Commission on Environment and Development advocates for environmental sustainability and ensuring future generations have the natural resources available to live an equal, if not better, way of life as current generations. Environmental sustainability also involves technical, managerial, and behavioral components, so environmental governance has received more attention as a comprehensive strategy to handle these complications. This Special Issue calls for original research articles and reviews that explore the many different facets of environmental governance and environmental sustainability. Research areas may include (but are not limited to) the following: -climate change; -biodiversity; -pollution; -environmental management; -environmental conservation; -environmental assessment; -environmental justice;

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
