Green Engineering and Sustainable Development in Production and Resource Management

Message from the Guest Editor

Green Engineering is a foundation for sustainability. Its principles are a tool for asking the right questions, considering the right factors, and building in the right parameters. One of the goals of green engineering is to maintain or provide comfort to all people who are affected in some way over time, which is possible by creating a balance between human activities and the environment. The ultimate goal of sustainable development as one of the cornerstones of human rights is to create inclusive justice for all, including future generations. Sustainable development is a concept that societies have achieved after a more accurate and deeper understanding of theirs. It must be acknowledged that the engineering world does not have the acceptance of its past without observing the principles and foundations of sustainable development. Increased pressure from stakeholders to implement environmental management initiatives has become the rule of business for firms across industries to engage in green processes and product development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
