

## Special Issue

# Food Waste Management and Sustainability in the Food System

### Message from the Guest Editor

Food waste is one of the main challenges threatening the sustainability of food systems, and its reduction is recognized as an urgent issue due to public concerns related to the expected growth of the world population, increasing pressures on environmental resources, and changes in dietary patterns.

This Special Issue invites authors to contribute with original research or case studies presenting new evidence concerning:

- Quantification of food waste and its impact in different stages of the food supply chain;
- Factors determining food waste at the consumer and household level;
- Strategies for the exploitation of losses and waste in different stages of the supply chain;
- Strategies implemented by producers or retailers in order to prevent and reduce food waste;
- Innovative solutions and actions proposed by public and private entities aimed at minimizing food waste along the supply chain;
- Solutions aimed at recovering food waste and promoting the donation of food and/or support food sharing practices for vulnerable consumers.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
