

Topical Collection

Industrial Symbiosis and Sustainability

Message from the Collection Editors

In the current economic and political environment, proper waste management systems are an unconditional priority, and challenge, for both private and public sectors. The research topic of industrial symbiosis seeks to address these concerns by improving the exchanges of resources between industries, where the waste of one company may be useful for others. When it comes to facing these challenges, industrial symbiosis allows for the reuse of materials that otherwise could have been wasted, and it prevents them from being misused or discarded altogether. This Special Issue intends to deepen the knowledge of industrial symbiosis and its implications for sustainability, one of the main concepts in the circular economy and industrial ecology. The potential benefits that industrial symbiosis can bring are diverse; therefore, contributions from different research areas are welcome. Researchers are encouraged to submit contributions that touch on several aspects of industrial symbiosis and its relationship to several contiguous topics.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
