Special Issue

New Perspectives for a More Sustainable Agriculture: From Plant Treatments to Postharvest Technologies

Message from the Guest Editor

In the last decades, the world population is constantly increasing, and it is estimated to reach 10.6 billion in 2050. To date, considering also climate changes. feeding the current world population is a hard challenge, that is expected become more pronounced if new solutions will not be applied. However, the realization of this purpose has come at the expense of nature, following in serious environmental problems. This Special Issue focuses to publish both originals articles and reviews about sustainable applications in agriculture. Papers dealing with the application of novel products (i.e. pure compounds, natural extracts and food/industrial wastes) working as biostimulants, fertilizers, insecticides or herbicides, and aimed to increase plant well-being, plant resilience to stress conditions, production yield and crop/fruit quality are welcome in this Special Issue. Moreover, the use of postharvest technologies aimed at extending the shelf life of fresh fruits and vegetables, and/or to preserve their nutritional and nutraceutical quality over time, are equally accepted.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
