

## Special Issue

# Sustainable Roads and Airfields: Pavement Materials and Pavement Engineering

### Message from the Guest Editor

The purpose of this Special Issue is to bring together recent advancements that have been made towards providing sustainable trafficable pavements around the world. There are countless kilometres of road and industrial pavements, sealed or unsealed, consisting of bound or unbound granular material, which enable safe transport of goods and people. The thickness of the pavement depends largely on the native soil (or subgrade), material and equipment available for pavement construction, vehicle loads and prediction of traffic over the required design life. Considerable natural and imported resources are consumed in the construction of pavements. As the granular materials in the pavement structure are traditionally produced by quarries, there is excellent opportunity to substitute waste materials, provided these materials do not impact on the environment and can do the job required adequately. Waste streams are reduced, as is the dependence on finding sources of sound rock. There are further “sustainable” opportunities to recycle existing degraded materials by employing additives in a pavement milling operation.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
