

Special Issue

Sludge: A Renewable Source for Energy and Resources Recovery

Message from the Guest Editor

Sludges are generally characterized by high organic and solids contents. Increasingly stringent environmental laws and discharge/disposal standards have forced sludge generators and wastewater treatment plant operators to adopt suitable sludge treatment and management strategies. Advances in sludge treatment techniques have made it possible to view sludge as a resource rather than a waste.

Sludge can be used beneficially for the recovery of energy in terms of biofuels (solid, liquid and gas), recovery of nutrients (nitrogen and phosphorus) and production of fertilizers, adsorbents, and construction material. Anaerobic digestion, gasification, incineration, pyrolysis, wet air oxidation, and supercritical oxidation are some examples of available technologies for resource recovery from sludge.

This Special Issue aims to address the application of various technologies for the treatment and management of sludge with a focus on resource recovery to enhance environmental sustainability. Original research papers and critical reviews will be welcomed.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
