

Special Issue

Intelligent System and Application Improving Enterprise's Sustainable Development

Message from the Guest Editor

The global COVID-19 epidemic and extreme climate change events have brought about increasing financial losses all over the world, and coupled with the continuous changes in global political and economic situations, they have introduced significant challenges to the sustainable operation of enterprises. In this changeable and challenging environment, companies are actively implementing ESG that considers the environment, society, and corporate governance, which can strengthen risk management, respond to sustainable transformation early, and often find new opportunities for the future of the company. Intelligent systems (ISs) can be applied to all aspects of human enterprises, such as business and finance, manufacturing and supply chains, media, the Internet, etc.

In light of this situation, authors are invited to submit high-quality research articles on the subject of decision making in intelligent systems and applications, improving the sustainable development of enterprises. In this Special Issue, related original research articles and reviews are welcomed.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
