Special Issue

Sustainable Strategies for Improving Water Quantity and Quality in Anthropogenically Transformed Areas

Message from the Guest Editors

The availability of high-quality water is increasingly challenging, especially in developing countries and regions with limited water resources. Climate change. marked by higher temperatures, increased evaporation, longer growing seasons, and altered precipitation patterns, is exacerbating water deficits. Human activities also impact water quality, such as urbanization, land reclamation, mining, and agricultural practices, disrupting water balance and affecting downstream communities and ecosystems. Water quality is deteriorating due to industrial and agricultural pollutants, causing eutrophication and algal blooms, leading to environmental and economic losses. Research on the impact of environmental factors on water resources, especially in anthropogenically transformed areas, is crucial for improving water availability. We aim to expand knowledge on these issues and promote solutions through this Special Issue of Sustainability titled 'Sustainable strategies for improving water quantity and quality in anthropogenically transformed areas.'

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
